Summary:

In this storytelling project I chose the baseball dataset because I thought it is an interesting dataset, First I started my visualization with using different techniques on the variables.

Design:

I designed each sheet with specific graph for example sheet 1 I used bar chart to visualize the name of the player over the handedness that made a home runs (HR), also I chose the circle bar for the second sheet to visualize the height and the weight of the players.

The same as the first graph I chose the same chart which is bar chart to visualize the names of the players over the handedness in sheet 3 , as for the last sheet I chose bar chart to visualize the average of batting for home runs over home runs(HR) with handedness of the players.

And to summarize it all I created a dashboard to show all my visualizations organized in one sheet.

Feedback:

A feedback from suha:

"Hi dina well done on your project it is obvious that you've done a wonderful job for a beginner on using tableau, but there are minor changes you have to do, first you don't need the title for every chart and in the fourth sheet you have to sort the graph from largest to smallest."
